

Interxion Supports Imtech's Move into the Cloud

For more than 8 years, Imtech ICT Austria has housed its infrastructure within Interxion's data centre. During this time it has become one of the leading providers of enterprise IT in Austria and is now looking to evolve even further with the introduction of cloud-based services.

The Challenge

Since 2003, Imtech has operated multiple customer infrastructures in Interxion's Vienna site. In 2008 it started to offer hybrid cloud solutions. Due to the nature of the new product line, Imtech required a data centre provider that could not only deliver best-in-class availability, but also offer multiple connectivity options and deliver the optimum environment for cost-effective development, launch and management of successful cloud-based services.

The Solution

Due to the history Imtech has with Interxion, it didn't need to look too far for a data centre partner with whom to expand its cloud offering. Interxion turned out to be the ideal colocation partner – providing the best conditions for the expansion of its cloud-based services. Interxion worked with Imtech to optimize its data centre infrastructure so it was able to meet the exacting requirements of Imtech's new cloud-based solutions.

Vladimir Mlynar, Director Service Management at Imtech Austria, commented “We have been working with Interxion for over 8 years and have had a very good relationship with them, so when we decided to move into cloud solutions, we knew Interxion's experience in this space would be truly beneficial.”

Interxion's cloud community is one of the most mature in Europe. The site network gives Imtech and its customers access to the most important business hubs and their markets. Direct access to over 90 carriers and ISPs, as well as the Vienna Internet eXchange (VIX), guarantees first-class connectivity from the Vienna site to business customers and end users.

Additionally, Interxion guarantees 99,999% availability, a point which was of key importance to Imtech continuing to grow its business with Interxion.

What Imtech does...

Imtech ICT Austria is one of Austria's leading companies for enterprise IT. Its core business comprises of IT infrastructure, software solutions and outsourcing.

Clients include Austrian Airlines, Bramac, Bundesrechenzentrum, Card Complete, Coats, DHL, Exapaq, OMV, Panalpina, Spar and Sony DADC Austria. Imtech ICT Austria is part of Imtech N.V. headquartered in Gouda (Netherlands). The High-Tech Provider reported in 2010 a turnover of 4.5 billion Euro.
